

R-LOG - Web Interface

Data from the R-log can also be viewed on a web browser in chart and table format, and downloaded as a CSV file. To enable this facility one of the 15 email recipients must be set to the web host address. As the unit emails data the server automatically collects the data and publishes to the web page. Each organisation is assigned a unique username and password allowing them to see only their R-Log units. The browser interface is very simple to implement and is available at a small monthly cost per unit to all R-Log users.

Web Interface - General Information View

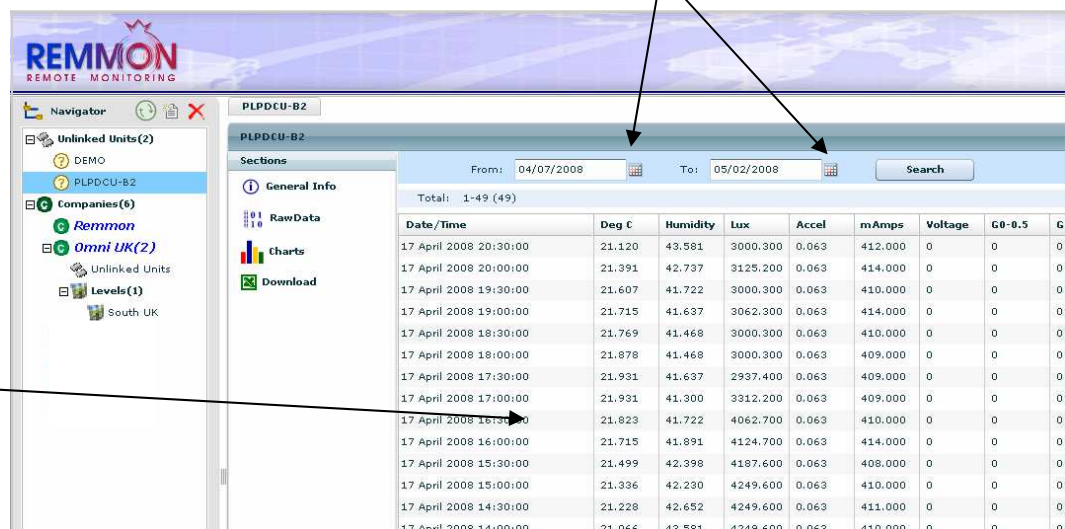

R-Log units can be grouped by application or geographical location.

Web Interface - Raw Data View

The date range for the displayed data is user selectable

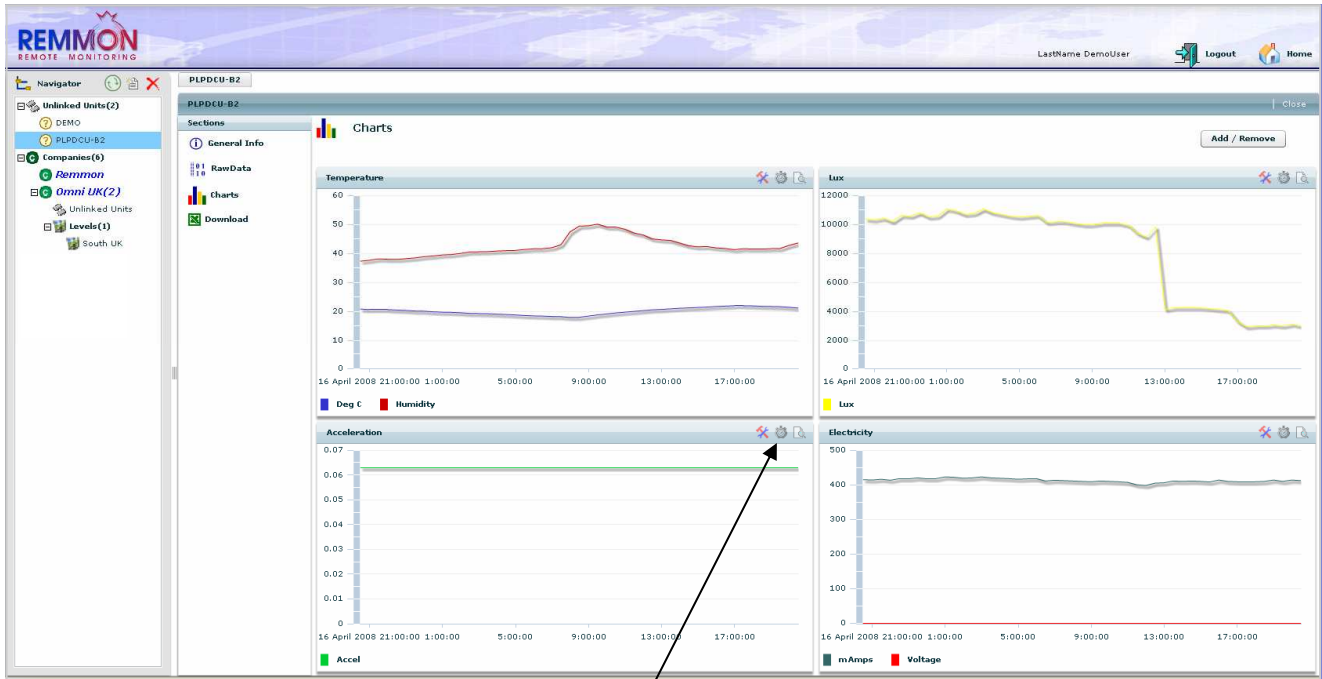

In this view data is displayed in table format

R-LOG - Web Interface

Web Interface - Chart View

Several charts can be displayed on a single page

Each chart can be edited for chart title, channels displayed, and trace colour. The date range for each chart is also user selectable

Individual charts can be zoomed into. If the mouse cursor is placed on a specific part of the trace the actual value and date/time can be viewed
